Connectors

Deploying the Aiimi Insight Engine within Microsoft Outlook, Teams, and SharePoint to maximise the reach of your enterprise.

Exchange 2.0

Our Exchange Connector makes it possible to ingest and enrich data from across the full Microsoft 365 suite. The Aiimi Insight Engine's search and discovery tools can then surface this data for use cases such as SARs (Subject Access Requests). This latest update delivers an enterprise-level solution for ingesting and enriching data from across a user's Microsoft 365 mail estate. It includes performance and scalability improvements that enable users to scan and ingest large numbers of inboxes more easily, with more varied content types.

Web Content Crawler 2.0

The latest update to our web content crawler improves the indexing of webpages and gives more flexibility when handling Created and Modified Dates.

Accessibility

Ensuring the Aiimi Insight Engine meets and maintains internationally recognised accessibility standards.

WCAG 2.1 AA

Having gone through internal and external accessibility audits, we are now working to get the Aiimi Insight Engine up to WCAG 2.1AA standards. This includes putting in place automated and manual accessibility tests to make sure we achieve and maintain this standard.

Reviewing Data

Serving additional context and valuable insights for search results using the Aiimi Insight Engine.

Related Results

Find related results, such as duplicates, recreated versions of documents, or documents related by common terms, no matter the format or where they are stored, all in one search result.

Relationship Map

Use this new lens to visualise relationships and connections between entities, documents, and data – for example, how names are connected to phrases, locations, and concepts within data sets. This enables users to 'connect the dots' without having to go through each result to find commonalities.

Customisation

Enabling you to customise the Aiimi Insight Engine to best serve your organisation.

Configurable Customer Theming

Admins can now customise and brand the Aiimi Insight Engine experience with company logos, background images, and colour palettes, via the Control Hub. We've included prompts to help ensure customised versions can still meet accessibility standards.

Migration Companion 2.0

This update provides a more robust migration experience, to help ensure your data migration succeeds first time. It enables you to better keep track of where your data goes during a migration, so you can easily find all migration configurations. This update is the first of many changes to the Migration Companion, coming throughout 2023.

Privacy & Compliance Companion 2.0

This update enables you to take greater control of what you share and with whom. SAR (Subject Access Request) owners can share a SAR with all members of a group, set contributors, and control who can access it. You can also assign collections or documents to specific users for review, both improving the division of workload and allowing SMEs to review their area of expertise only. The new 'My SARs' tab enables you to track progress and stay on top of upcoming deadlines, outstanding reviews, or new requests, improving the visibility of SAR commitments across the business.

Aiimi Insight Engine product.**

Test Automation – Search & SAR (Subject Access Request)

We're reducing the time spent on manual regression testing, so that we can have more regular releases and new features for the Aiimi Insight Engine. We're automating regression tests for Search and SAR first, which will enable us to perform multiple regressions throughout development.
